AUTOMATIC AIR FREIGHT PALLET HANDLING

POWERED CARGO ROLLER SYSTEMS

Making light work of heavy loads

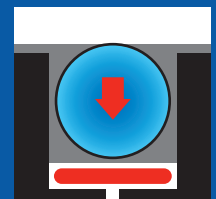

- Loads/unloads automatically air cargo ULD containers from trucks for airport airside and roadside deliveries
- A rise and fall DC 24V powered cargo roller used in conjunction with the Hydraroll Pneumatic roller track. 24 amp max power consumption
- Significantly speeds up truck loading by one man @ speeds of 8m per minute from dock-side scissor lifts and conveyors
- External stainless steel control box giving individual/segmental lift capability
- Handles all flat bottomed individual, ULD containers and jet engine transportation pallets up to a maximum 20,000kgs with no product damage
- Operator controls with fail safe auto down facility via effective QEV (quick exhaust valve)
- Braked motor prevents pallet roll out when power is not applied
- Polyurethane roller surface gives grip/drive and long roller life
- 500 trucks in daily operation at all major European airports
